DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, and 26-32 drawn to polyclonal antisera, a transgenic non-human animal, antisera produced by the same transgenic animal, and a method of producing the same transgenic animal classified in class 530, 530, 800, and 800 subclass 389.1, 389.4, 14, and 24.
- II. Claims 20-25, drawn to a method of neutralizing an antigen in a human, classified in class 424, subclass 133.1.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. The antisera of invention I can be used to detect an antigen in a Western blot assay. The method of invention II can be used to treat a disease in humans. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and separate search requirement, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

A telephone call was made to Barbara Rae-Venter on 7/5/00 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
